Tips & Tricks for Coping with Injections

Explain Why

Tell your child why they need injections and answer any questions they have honestly.

Give Choices

Give your child control by using a Poke Plan to help them make choices about what will work best for them.

Coping Strategies

Encourage your child to choose coping strategies distraction, counting, watching) and *practice* them before the injection.

Distraction

Help your child take their mind off the injection by focusing on something they ike (singing, watching a show, playing a game).

5

Be Still Make sure you understands b

naerstands being still an make injections go aster and less painful.

Try Ice

Placing ice on the site for 30 seconds before the injection can help numb the skin.

Us Try too

Use a Tool

Try using a sensory distraction tool during the injection, like vibration. These tools can help minimize pain.

Deep Breathing

Taking a deep breath (try blowing bubbles or a pinwheel) during the injection can help relax your child's muscles.

Time

Try to keep the time you spend on injections as short and calm as possible. Delaying and prolonging can increase anxiety.

Rewards

Have your child place a sticker on an incentive chart or get a small prize when completed to help encourage coping and validate success.
